

BEAUFORT TREBLE

The Beaufort Treble, introduced and patented by Rice some forty years ago, has continually been developed and improved and this is the very latest design in its long history. It is a very versatile trailer, with its two and one loading arrangement and it is the perfect answer for carrying three horses (two 16hh and one at 15hh max) in comfort, safety and style. The innovative three horse partition allows you greater flexibility; you can close the front partition and move the split breast bars forward, thus transferring the weight correctly over the axles and maintaining the required nose weight for smooth towing. This also enables the room forward of the breast bar to be used for transporting tack, feed, a trap, etc. Again, in line with the B60, rubber ramp facings, twin ramp assisters on the rear ramp, large side windows and side vents are standard. There is also an option available to increase the gross capacity of this trailer to 3000kg if required.
